SE Lab 1 – Use-Case Flow Specification:

Problem Statement #60 – Podcast Guest Scheduling & Outline Builder

Name: Kedar S Vastrad | SRN: PES1UG25CS822 | Section: K

Use Case: UC-01 – Select Interview Slot & Submit Topic Outline

Actors: Podcast Guest, Show Host, Notification System

Preconditions

- Podcast Guest has access to the system.
- Show Host has configured available interview slots.
- Notification System is available.
- Guest has valid contact information.

Postconditions

- Interview slot is successfully booked.
- Guest's topic outline is stored.
- Calendar invitation is sent through the notification system.
- Topic outline is attached to the episode board.

Main Success Scenario

1. Guest logs into the system.
2. Guest selects “Select Interview Slot”.
3. System retrieves available interview slots.
4. System displays available dates and times.
5. Guest selects a preferred interview slot.
6. System validates that the selected slot is still available.
7. Guest enters structured discussion topics and biography links.
8. Guest submits the topic outline.
9. System stores the booking and topic outline.
10. System sends a calendar invitation to the guest and host.
11. System attaches the topic outline to the episode board.
12. System displays a booking confirmation.
13. Use case ends successfully.

Alternate Flow A1 – Interview Slot Unavailable

1. At step 6, the system determines that the selected slot has already been booked.
2. System displays a message that the selected slot is unavailable.
3. System displays other available interview slots.
4. Guest selects another available slot.

5. System continues from step 6 of the main success scenario.

Alternate Flow A2 – Topic Outline Incomplete

1. At step 8, the system detects missing required topic information.
2. System highlights the missing fields.
3. Guest corrects the information.
4. Guest submits the topic outline again.
5. System continues from step 9 of the main success scenario.

SE Lab 1 – Requirements Engineering & UML Use-Case Modelling

Problem Statement_60 :- Podcast Guest Scheduling & Outline Builder

Name: Kedar S Vastrad | SRN: PES1UG25CS822 | Section: K

Requirements Table:

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale (short)	Comments
FR-001	Functional	The system shall allow guests to select interview time slots and submit structured bullet points for discussion topics with biography links.	High	Pass: Slot booked, calendar invite sent, and topic outline attached to episode board. Fail: Booking permitted on blocked dates.	Core guest scheduling and topic submission functionality.	Clear and testable
FR-002	Functional	The system shall allow the show host to view guest availability and confirm or reject an interview booking request.	High	Pass: Host can view the request and confirm or reject it. Fail: Host cannot update the booking status.	Required for managing guest bookings.	Specify booking status
FR-003	Functional	The system shall allow guests to edit or update their submitted discussion topics before the interview.	Medium	Pass: Updated topics are saved and displayed on the episode board. Fail: Previous topics remain after an update.	Keeps episode information up to date.	Clear and testable
FR-004	Functional	The system shall generate timestamped run-of-show production notes from confirmed guest topics.	High	Pass: Production notes containing the submitted topics and timestamps are generated. Fail: Submitted topics are missing.	Supports episode preparation and production.	Specify timestamp format
FR-005	Functional	The system shall allow the show host to download the generated episode production notes as a PDF.	Medium	Pass: Host downloads a readable PDF containing the complete production notes. Fail: PDF is missing or incomplete.	Allows notes to be used during recording.	Clear and testable
NFR-001	Nonfunctional	The show outline generator must compile submitted guest topics into a formatted PDF production sheet in under 1 second.	High	Pass: Benchmarking confirms generation time is under 1 second. Fail: Generation takes 1 second or longer.	Ensures fast production-note generation.	Clear performance target
NFR-002	Nonfunctional	The system shall protect guest booking and topic information so that only authorized users can access it.	High	Pass: Unauthorized users receive an access-denied response. Fail: Unauthorized users can view protected information.	Protects guest and episode information.	Specify authorized users
